

List of fuel related issues that Fleet has reported to Departments over the past year.

Fuel monitoring is designed to prevent misuse of fuel cards. Each employee has their own designated PIN, and each vehicle has a designated fuel card. Monitoring tells us who fueled what vehicle and when, as well as how much fuel was dispensed and at what location. We also have access to video surveillance of fuel sites. Since its inception, we have had only 2 incidents that required investigation; both were found to be legitimate uses. We continue to monitor fuel usage on a daily basis and are confident that the measures in place are working.
